

AI smart cat eye - Wukong series

Q51

1080Fhd | 170°Field of view | Multi-touch | Infrared night vision | Telephone notification | Magnetic fixation

Face recognition lets you know about family safety

Intelligent door control built-in system-level face recognition algorithm for face recognition and entry of family members, the response is faster and more effective, supplemented by APP real-time reminder function, to ensure that when the family returns home, you can know the first time.

(The illustration shows the effect of the advertisement, please refer to the actual product)

Human body sensing, 24-hour real-time monitoring

The German PIR infrared sensor is combined with the image AI technology to optimize the algorithm and the network. Some people immediately capture or record the video and push the reminder information to the mobile APP through the cloud encryption server.

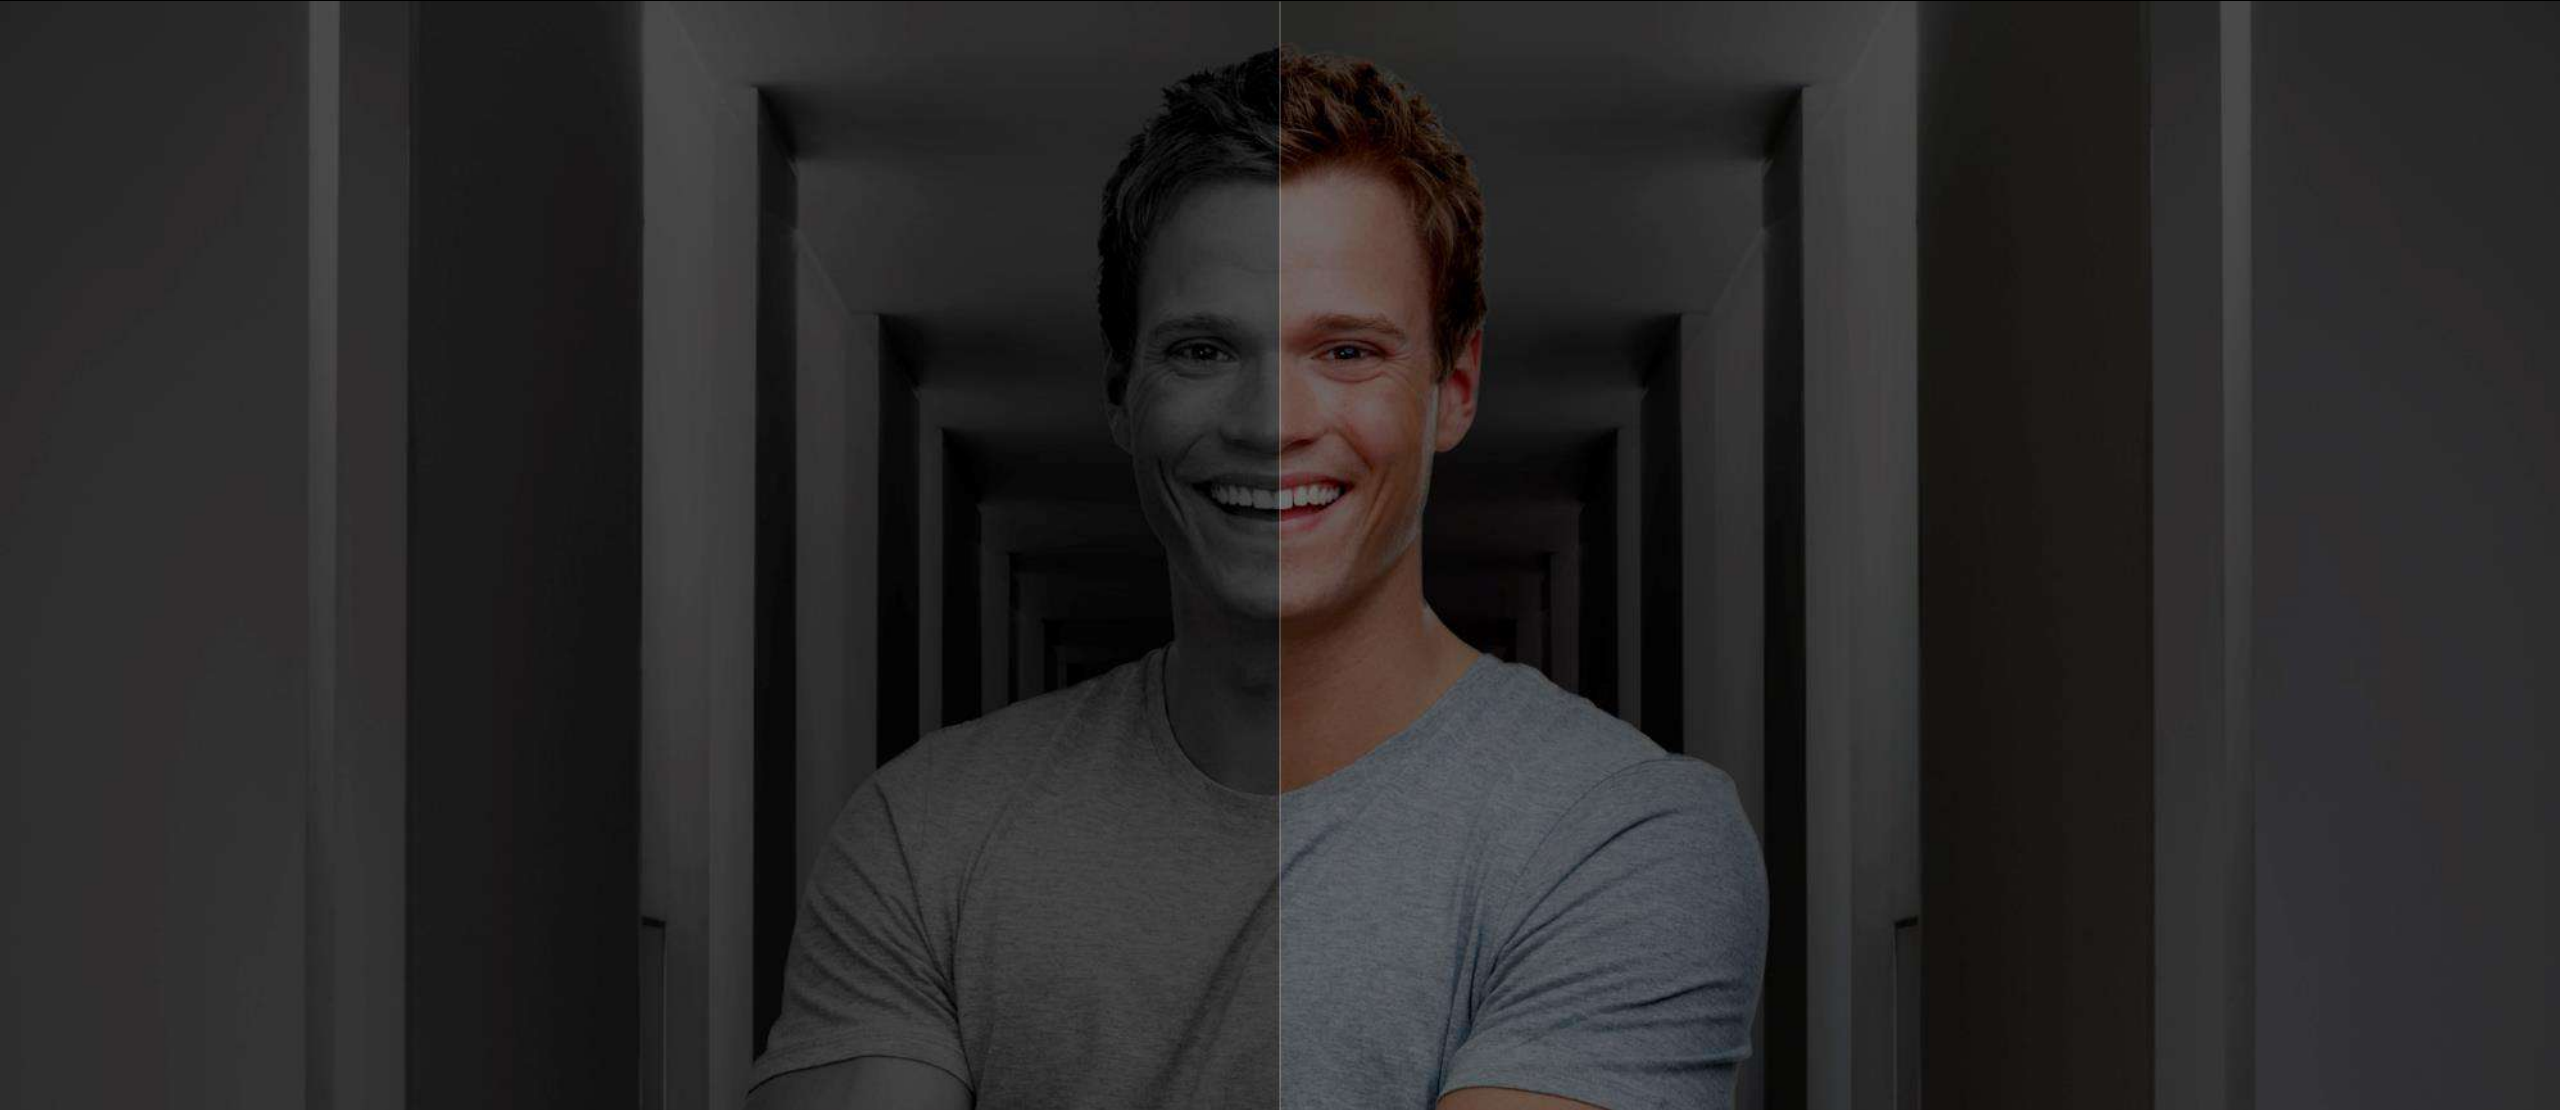

170° wide-angle lens, wider field of view

With a monitoring level wide-angle lens, the high aperture of the large aperture, even in the complex lighting environment, even the backlight, the image can be clearly presented, far better than the traditional cat eye effect.

Low-light full-color technology to extend color recording time

Even in a low-light environment, a color image can be seen by relying on the fill light of the doorbell light. In the same environment, other electronic cat eyes need to switch to the black and white effect of the infrared light fill mode.

Switch to black and white screen under normal low light conditions

Color image remains in low light conditions

Noise reduction infrared night vision, let the truth hide in the dark

Equipped with 4 high-end infrared night-vision lights, professional infrared lampshade, better permeability, clearer night vision effect in dark light and low light.

Normal visual inspection

Infrared fill light night vision effect

HD shooting, reproduction of the original color

With 1080P high-definition picture quality and IR-CUT dual filter, it can make the daytime picture display rich and full, and the visual experience is more comfortable.

No IR-CUT shooting in daylight, infrared light interference is serious, color distortion

With IR-CUT shooting in daylight, the color is bright, restore the real

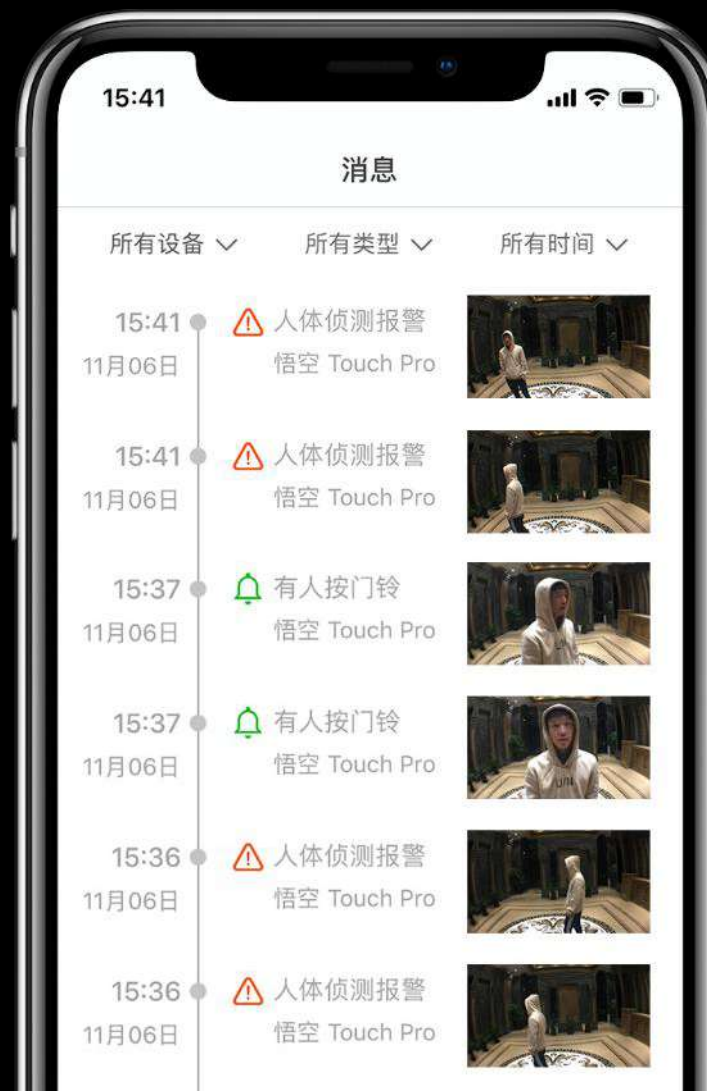

Link smart door locks to optimize your life

When you are not at home, you can use your smart door to remotely talk with your host when you are visiting. After the owner confirms the identity of the other party, you can send a temporary authorization key to the visitor through the mobile app to solve the temporary need, and the convenient life is more secure.

Exclusive APP, alarm, visitors at a glance

Whether you are traveling or working on a business trip, the smart gates will be actively recorded.
You can play back your history at any time with a dedicated app.

点击对讲

Not at home, real-time video intercom, remote communication

Support two-way voice real-time call, one-touch direct dial to initiate a call. The professionally tuned built-in microphone and speaker ensure that the sound is loud and clear, as true as face to face.

The exclusive hardware system based on Android deep customization is safe, stable, advanced, easy to use and efficient.

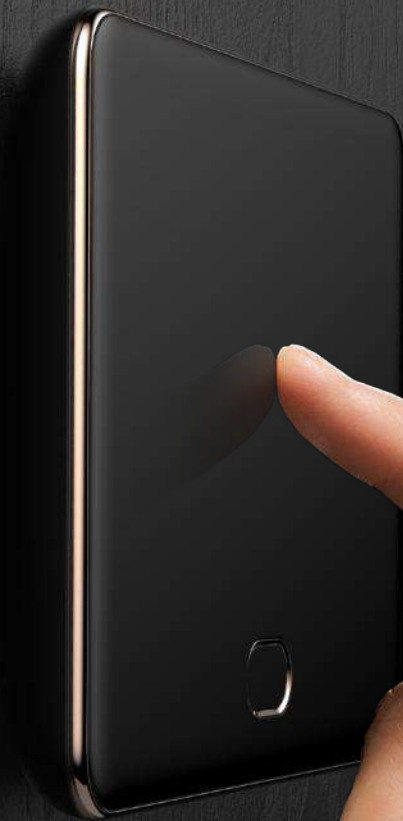

Silent guardian because of power

ARM quad-core processor, stronger performance and lower power consumption, easy to handle multi-application operation, door control system alarm is faster and more stable.

15 days of circulating cloud storage, safe one step in place

Support built-in storage and cloud storage, image encryption upload to the cloud, effectively avoiding the loss of key evidence caused by vandalism, 15 days of loop coverage, providing more choices for your security

HD capacitive touch screen

With high-definition multi-touch screen interaction design, both the elderly and children can easily use it, so that the whole family can care about family safety.

Metal body and removal alarm

The outboard handset is designed with a high-strength, all-metal body, and if the handset is disconnected abnormally, the host will immediately sound an alarm to alert the family.

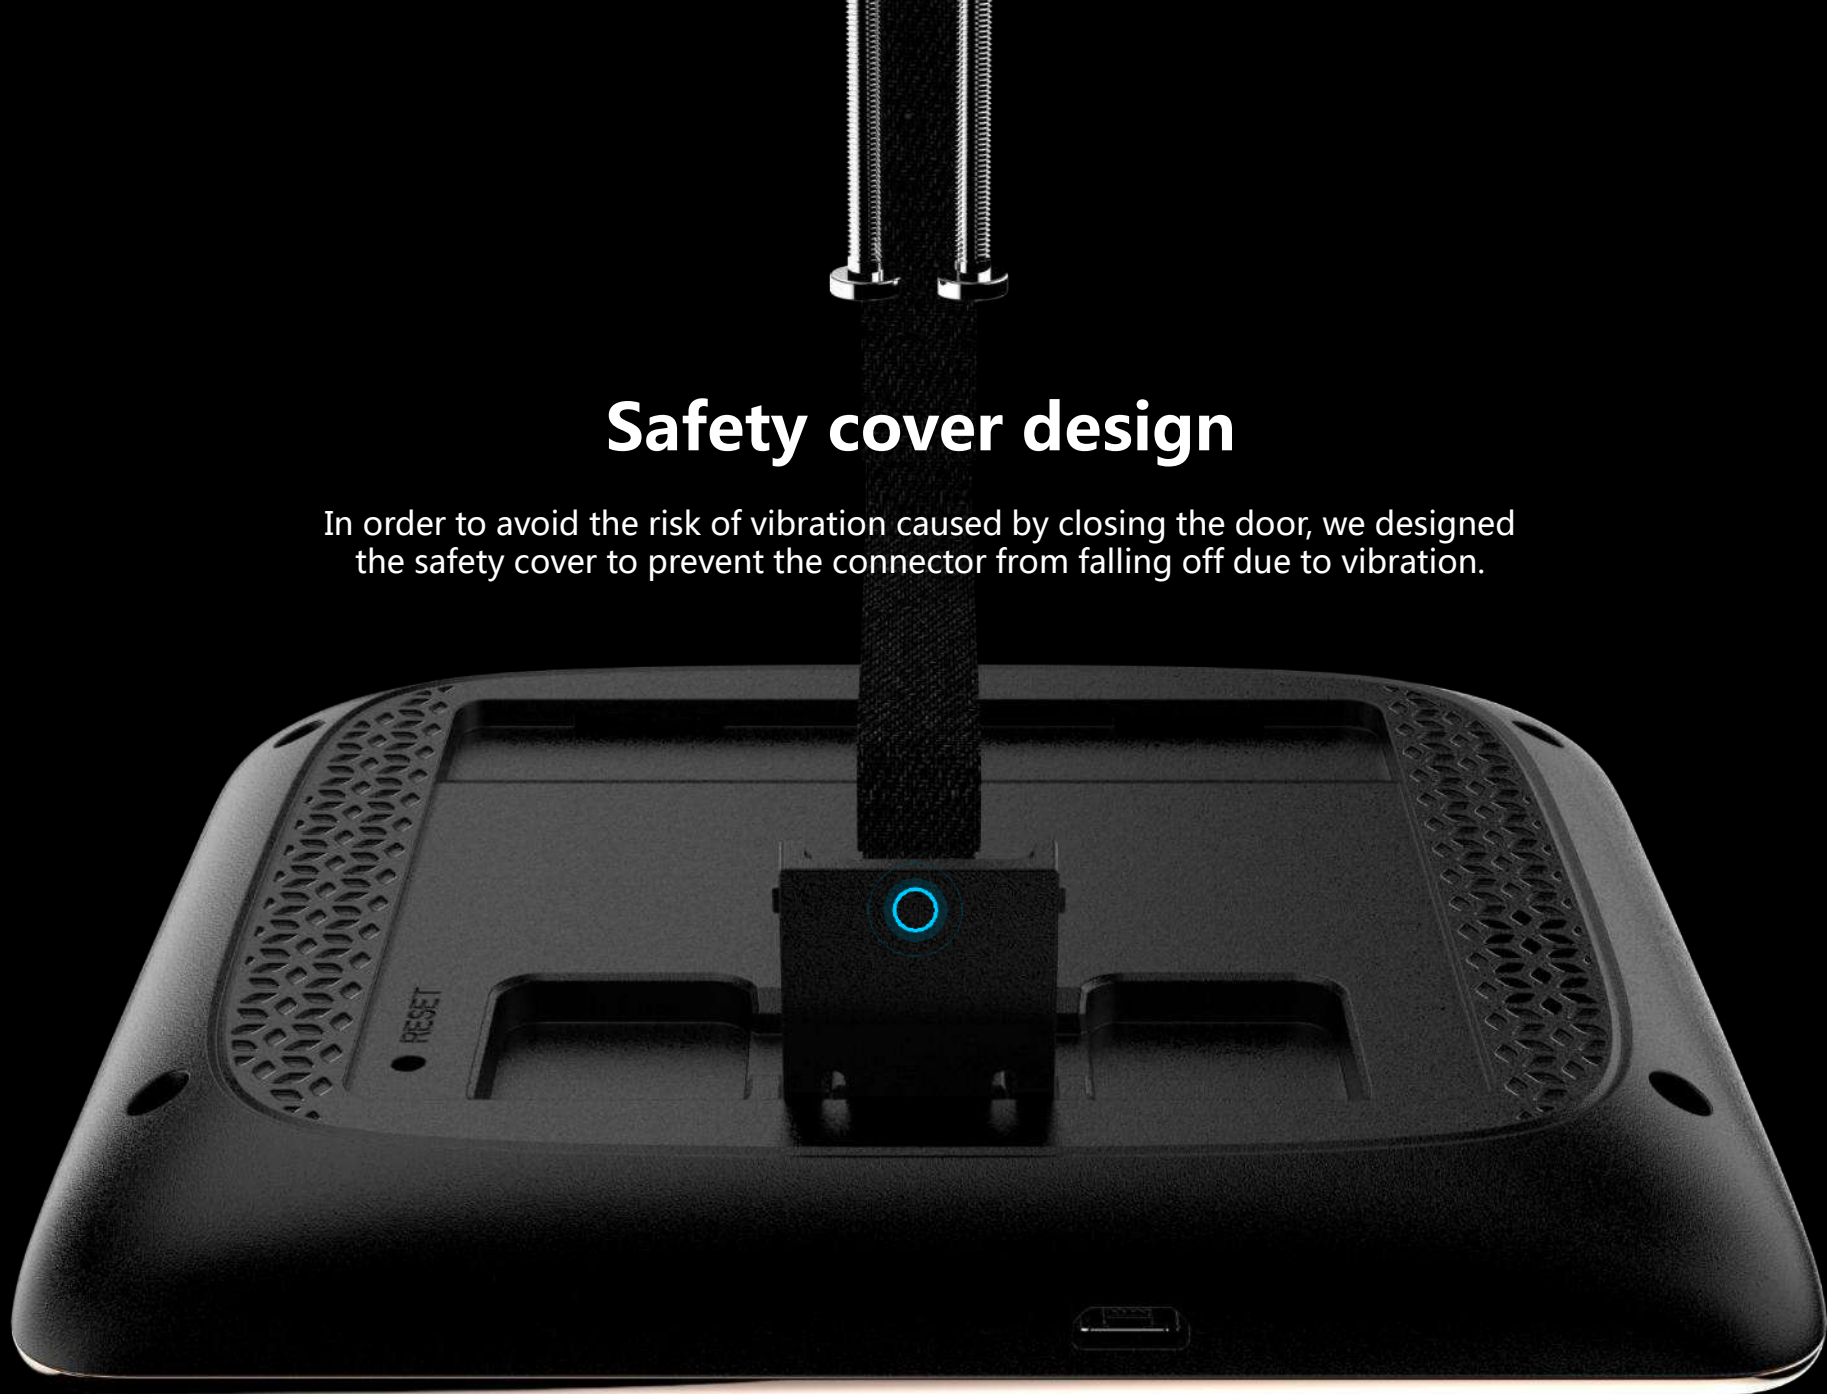

KYOCERA connector

In order to ensure the stability of high-frequency image data transmission, we have selected the KYOCERA Board to Board connector, which extends the plugging life and is more stable and stable.

Safety cover design

In order to avoid the risk of vibration caused by closing the door, we designed the safety cover to prevent the connector from falling off due to vibration.

Large capacity battery, long battery life

Built-in 5000mAh high-density polymer lithium battery, combined with professional intelligent power-saving technology, can stand by for 60 days.

(This standby time data is tested by Cloud Control Huilian Lab, so that the product is not connected to the network and the test standby time based on PIR is not turned on. Actual standby time may vary due to different test conditions, actual use time and ambient temperature, use Frequency, router, etc.)

Four strong magnets are designed for adsorption and installation is more convenient

The structural engineer took 2 months. After countless trials, I finally got rid of the trouble of fixing the mainframe with screws. Built-in four strong magnets, one plug, one hook, one suction, simply complete the installation of the host.

Permanent firmware upgrade, there are more periods in the future

We have been working hard to make smart gating more and more powerful. In the future, it will add more AI functions. Through firmware changes, smart gating will support more smart home interconnections, and the future will be smarter and smarter.

Easy to install, users can install it themselves

Cloud Control Huilian intelligent door control can adapt to most security doors on the market. The adapted cat's eye aperture range is 15mm-50mm, and the fitting door thickness is 35mm-110mm.
