

## Double opening linkage

Two units are used to control double doors to open synchronously, and only one wire is needed to connect the two sets for communication.

## Hold-open Function

When the door is fully opened, block it for 5 seconds to activate the Hold-Open function. Just pull the door 5 cm towards the closing direction to restart the usual opening/closing process.

## Power failure push

In case of power failure, the door can easily be manually opened or closed. The manual operation force is only 20 N.

## Rich interfaces

The product presents an external interface to facilitate connection of additional equipment and improve the user experience.
